Lab 6
Screen Processing

Instruction: Setup the following screen below with one unit of space from each side (you may choose background and foreground colors of your liking).

Set character 'A' to move rightwards from the middle row and leftmost column. You use the arrow keys to move the character to any direction. When any character is pressed, i.e. aside from the arrow keys, the character will stop then continue moving when one of the arrow keys is pressed. When the 'ESC' key is pressed, the program will exit. Note that the screen wraps around, so when the character reaches the black background, it will move around the opposite side.
